

## **PIX TIMING- POLY BELTS STANDARDS:**

### **Features:**

- High efficiency due to positive drive.
- Fixed speed ratios.
- No re-tensioning after installation.
- Low maintenance with wide variety of power transmission capacities and drive speeds.
- Operating temperature range -30°C to +120°C.

### **Application:**

PIX TIMING POLY BELT is a double-sided power transmission belt most popularly used in flour & rice mill, rolling mills, fruit mill industries and special industrial machines. Applicable for positive engagement, multi-pulley drives with requirement of transmitting higher power at greater speed ratios.
